J.P.Morgan

The Global SMid Radar

Q3 2014 Update

Our Global SMid Radar is a vehicle through which we consistently bring you our top ideas within the global universe of Small/Mid-Caps (mkt caps < \$5 Bill). This long/short global model portfolio mixes our top-down strategic analysis with our bottom up stock selection. This quarter we are adding 4 new "Investment Opportunities" (see bullets below) and closing 4 (see Pg 4 for perf details) — Austal, Commercial Bank of Qatar, Multiplus and Yanbu Cement.

In order to align our incentives with those of our clients (and as we've been doing for the last 6 yrs in our European SMid Radar, launched in Feb 2008), we run this model portfolio in as realistic a way as possible, following a pre-defined methodology with regards to portfolio composition, risk mgmt, & perf. analysis (please see Pg 2 for a detailed description of our investment methodology).

<u>4 additions to the "Investment Opportunities" section of our Global Radar:</u>

- <u>Beijing Capital Int'l Airport (</u>694 HK \$2,951m mkt cap)
 - Accelerating int'l traffic growth to drive profitability, valuation discount to regional peers unjustified
- <u>Even</u> (EVEN3 BZ \$690m mkt cap)
 - Improving results at an attractive valuation
- Gem Diamonds (GEMD LN \$373m mkt cap)
 - o A relatively safe play on positive outlook for diamonds
- WorleyParsons (WOR AU \$4,074m mkt cap)
 - o Clear path to medium term earnings growth with oil linkage

^{*} Registered/qualified as a research analyst under NYSE/FINRA rules. See page 67 for analyst certification and important disclosures, including non-US analyst disclosures.

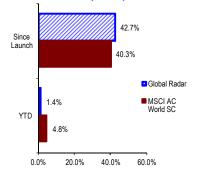

J.P. Morgan does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision.

The Global SMid Radar Methodology

The Global SMid Radar is our list of top stock ideas, which we run as a hypothetical long/short portfolio in accordance with the following methodology:

- Those stocks labeled "Investment Opportunities" will be treated as longs, while those labeled "Stocks to Avoid" will be treated as shorts.
- Shares are bought and sold at the avg Bloomberg VWAP price of the trading session prior to AND following the publication of the investment decision.
- New positions will have the weight of 1/25th of the current portfolio's NAV.
 Once the portfolio runs out of cash, new positions will be funded by selling existing ones, with each new investment equal to the total exposure of the portfolio (long + short positions) divided by the number of stocks in it (longs + shorts).
- Those stocks treated as shorts will be assigned a borrowing cost/annum equal to 80 bps, and a 10% haircut (i.e. 90% of the position will be a source of cash).
- The residual cash balance will be invested in global/regional MSCI Small Cap benchmark indices according to our regional allocation preferences.
- Returns will be calculated in local currency.
- Performance will include a 50 bps/annum deduction as a proxy for trading costs.
 Our European SMid model portfolio (launched in Feb '08) suggests our investment horizon is >12mths, thus limiting trading costs we have turned the portfolio over only ~1.6x since launch!
- We will impose a 25% stop-loss (relative to MSCI AC World SC index) on all positions.
- Lastly, risk management is at the core of our investment approach, and therefore we will look to limit volatility via: 3mth Beta and VAR analysis, liquidity constraints, maximum weightings per holding, limited portfolio turnover etc.).

Beijing Capital Int'l Airport (694 HK / OW / HK\$5.30)

Accelerating int'l traffic growth to drive profitability, valuation discount to regional peers unjustified

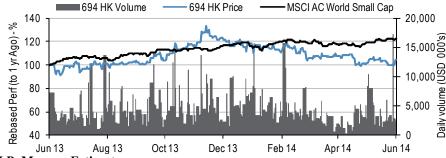

Investment Highlights:

- We believe the capital's airport assets are undervalued, while its grw potential is underestimated despite its distinctive business model & still-young maturity profile.
- We expect the impending approval of Beijing's second airport project to act as a positive price catalyst.
- Capacity bottlenecks seem relieved by reallocation of landing slots to the more profitable int'l routes. With supply less of a constraint, we expect a virtuous cycle of demand-driven growth for int'l air travel.
- An increase in payout is conceivable from 2015, in our view, which we believe should further enhance BCIA's attraction.
- BCIA appears attractively valued at current levels, particularly relative to other regional airports of similar operational scale, namely MAHB and AOT, both of which have held intriguingly well despite weaker-than-expected operational results YTD.

Valuation / Risks to our View: Our DCF-derived Dec-14 PT of HK\$8.3 translates into a tgt P/B of 1.7x/1.6x, Op-CF to EV yld of 9.6%/9.9%, and EV/EBITDA of 9.2x/8.3x on FY14/15E. Our DCF-based val. continues to include the potential capex related to the Beijing 2nd airport without incremental benefits. Removing all the capex associated would lift our PT to HK\$14.0. Downside risks to our view: weaker-than-expected traffic growth, faster-than-expected increase in costs, and untimely launch, or cost overrun of the new capex project – i.e., investment in the Beijing second airport, if the company does choose to participate in an asset-heavy way.

BCIA in a Nutshell: Beijing Capital International Airport Company Limited was incorporated as a joint stock company with limited liability in China on 15 October 1999 to own and manage the aeronautical operations and certain ancillary commercial businesses at the international airport in Beijing. The company was listed on 1 February 2000 on the HKSE.

Bellway (LRD LN / OW / GBp 1,570)

High-quality, relatively undervalued play on a sector that has further to go

Investment Highlights:

- Bellway fits our preference "Rerating" rather than pure "Recovery" P/E 15E of 7.5x vs sector avg 8.1x and 1.1x tNAV vs sector avg of 1.5x... despite sporting higher than sector avg ROCE (14% vs 12% based on JPM's '15 ests). Bellway has the 3rd highest return on tNAV but is the 2nd cheapest in its universe on P/tNAV 14E (1.3x vs 1.6x sector avg).
- Strong FCF story with solid balance sheet, where the CF can be employed in accretive ways (i.e. dividends/ reinvestment in the biz). While FCF for a home builder is clearly a very cyclical metric, we believe that our ests can provide investors with a sense of the value proposition we see, forecasting 34% of mkt cap generated in FCF in over FY14/15, with Div Yld reaching 4.4% in FY15. We note that the company exited FY13 with a net cash position of £24m.
- A growth story for today rather than if and when the economy is firing on all cylinders. JPMe calls for Bellway to deliver rev grw >20% in FY14 and FY15, with EPS grw of 59% and 29%. We see structural tailwinds that could keep the grw rate far above that of the broader economy a lasting imbalance of supply and demand in the UK and interest rates that are likely to remain at depressed levels for an extended period of time. We believe recent concerns are overdone around the potential impact of an earlier rate rise and new BoE measures intended to reduce riskier mortgage lending; we continue to see upside risk to earnings estimates and still believe we are in the early stages of a UK housing mkt recovery.

Valuation / Risks to our View: Our Jan-15 PT of GBp 2,000 is based on the following weighted P/Es: i) our base case EPS 2016 on a multiple of 10-11X (a 10% premium to historic levels); ii) our 'sustainable bull case' estimates on a multiple of 9.0-9.9x. We weight our price targets 2/3 towards our base case EPS, 1/3 towards our 'sustainable bull case', and discount by one year. Risks include: a slower UK consumer recovery than anticipated; a deterioration in mortgage availability; a sentiment overhang if mkt assigns improvements to Help to Buy rather than genuine recovery, or concerns over mkt stability in an interest growth environment.

Bellway in a Nutshell: Bellway is one of the leading UK housebuilders with national presence and 2,000 employees. In 2013, the company delivered 5.7K completed homes, at an avg selling price of £193K, a total group revenue of £1.1bn, with operating margins of 13.6%, and RoCE of 12.3%.

Cadence Design (CDNS US / OW / \$17.34)

Solid Fundamentals + Cash Flow Deserve Parity Multiple

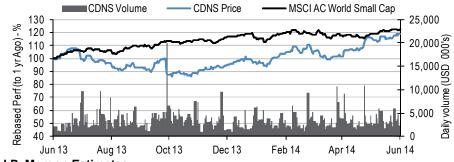

Investment Highlights:

- Semi R&D spending provides the environment for bookings growth. Despite the choppy semiconductor end-mkt through FY12-13 with the inconsistent macro environment, we see EDA revenue growing ~6% in FY14E as semi cos continue to adopt smaller geometries & new FinFet transistor architecture. While this end-mkt has not seen consistent improvement, we still believe the backdrop is good enough for Cadence to deliver on our est. 10% bookings growth for FY14.
- High visibility revenue model and cost control support margin expansion. The company books 90%+ of contracts under three-year subscriptions, giving it excellent visibility into near-term results. This visibility combined with good cost controls should put CDNS on track to reach a mid 20% operating margin in FY14E. However, CDNS has talked about targeting a ~50% contribution margin, so we ultimately see this as being a 30%+ operating margin company long term.
- Combination of strong bookings and improving profitability drive double-digit growth in FCF. With the improving customer backdrop, solid pipeline of contract renewals, & higher profitability, we are modelling double-digit grw in operating CF in FY13-15. We believe CF is a particularly important metric for the company as investors tend to value subscription names on an EV/FCF basis.
- Capitalizing on recent sluggish stock performance. The shares have underperformed over the last year, providing a buying opportunity in our view. We see two reasons for the underperformance: first, CDNS did not raise guidance post 2Q13 and 3Q13; second, emulation results were down in FY13, turning what had been a tailwind into a headwind. We believe both reasons are overdone, as new product introductions could help reverse this trend in coming quarters.

Valuation / **Risks to our View:** Our December 2014 price target is based on 13x FY15E free cash flow, inline with SNPS. The biggest risk in our view is a slowdown in semiconductor results, which could negatively impact R&D spending.

Cadence Design in a Nutshell: Cadence competes in the electronic design automation (EDA) industry, which sells software to semiconductor companies to help in the design, verification, and manufacturing of chips. The industry is dominated by three vendors: Cadence, Synopsys, and Mentor Graphics. The company has a subscription revenue model, which means it recognizes revenue ratably from backlog over the length of the contract term.

Cape (CIU LN / OW / GBp 294.50)

Legacy contract base purged and internal controls strengthened - growth multiple possible

Investment Highlights:

- Internal risk controls overhauled, restructuring close to completion. The CEO and CFO are seasoned turnaround specialists with success at putting companies back on a growth path. New personnel, risk controls and management information systems are now in place, enabling more efficient project tenders and execution monitoring. Cape is emerging from its restructuring phase; we believe a growth phase should follow.
- Sustained dividend, strong cash flow yield. Cape offers a 2015E dividend yield of 4.8% which is more than double the average 2015 consensus dividend yield of 2.3% for its closest UK OFS peers. Cape has offered a stable dividend even in the midst of the operational issues it faced in 2011-12. Cape also offers a 2015E equity FCF yield of 9.0%.
- **Key potential triggers over the next 6-12 months.** 1) *H1 2014 results on 27 Aug*: We look for an increase in order book vs. YE 2013 and sequential growth in margins. 2) *CMD in Sept.*: We look for more details on the growth phase of Cape's strategy. 3) *Ichthys LNG contract*: Award of this c.£140m contract to Cape will significantly improve its order book and secure future revenues.

Valuation / Risks to our View: We value Cape at 350p based on a target 2015 PER of 11.0x. The main downside risks to our Overweight view on Cape relate to project delays, competitive dynamics and further provisions on legacy contracts.

Cape in a Nutshell: Cape provides access systems, insulation, painting, industrial cleaning, blasting and other services to the Oil & Gas and Power sectors. Cape's services are utilized throughout the lifecycle of an industrial asset from construction through maintenance to decommissioning. It operates in three geographic regions: (i) UK, Europe and CIS, (ii) Middle East and North Africa and (iii) Asia Pacific.

Cineworld (CINE LN / OW / GBp 328.0)

The cheapest listed cinema business in the world?

Investment Highlights:

- The combination with Cinema City has created the second-largest cinema operator in Europe, which in our opinion has significantly higher long-term growth prospects than legacy Cineworld, given the structurally lower penetration of cinema in Central and Eastern Europe. The prospects for cinema attendance in that region are positive as new sites are rolled out. Strategic acquisition may also complement growth.
- The acquisition of Cinema City has nearly doubled our forecast rate of top-line and earnings growth and we project it to be 10% accretive to EPS in 2015, the first full year of ownership. We forecast an 18% CAGR of EPS growth between 2014E and 2016E, considerably higher than our pre-transaction estimate of 11%.
- We believe that the concerns of the market may diminish as it gets more exposure
 to Cineworld's management team and sees evidence of delivery on the ambitious
 growth plans that have been articulated. On the basis of our earnings estimates,
 Cineworld is trading at a discount to the forward multiples of its peers that we see
 as unwarranted.

Valuation / **Risks to our View:** Our Jul-14 PT of 400p is a 50:50 weighted avg of our DCF and multiples-based valuations. Our DCF valuation of 439p uses a WACC of 7.9% and 1% terminal growth rate. Our multiples-based valuation of 362p applies a P/E of 14.9x to JPMe '15E EPS (15% discount to median FY2 P/E of 12 int'l peers). Risk include: declining cinema attendance, poor film line-up, adverse weather, loss in mkt share, poor execution of cinema network expansion strategy, failure of the advertising mkt to sustain its recovery, a deterioration in consumer discretionary expenditure.

Cineworld in a Nutshell: The combination with Cinema City has created the second-largest cinema operator in Europe. In the UK and Ireland, Cineworld is one of the leading cinema operators with market share of nearly 30%. Cineworld has a modern estate, composed almost entirely of multiplexes. All UK and Ireland screens have been converted to a digital format.

CSG Ltd (CSV AU / OW / \$1.00)

An Enterprising Business which is More than Printers

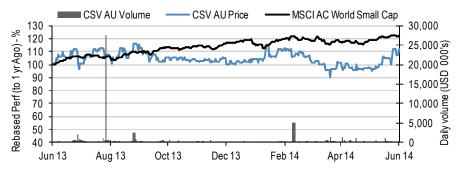

Investment Highlights:

- cSV is moving away from being a pure hardware reseller to more of a managed services role helping organisations to reduce IT and printing costs. It operates three businesses: Business Solutions which sells and services multifunction devices; Enterprise Solutions which provides managed print solutions to corporate and Government entities with the aim of reducing printing costs; and, Finance Solutions which offers clients the ability to lease devices.
- It is no secret that sales of multi-function devices are falling with volumes declining 2-3% per year. CSV's revenue model is moving away from a per-page basis to per user basis with CSV helping clients to reduce costs by optimising the printer fleet, introducing controls to reduce wastage and energy costs and centralising procurement. However, our valuation conservatively does not factor in much upside from this change in revenue model. Instead it forecasts CSV to deliver the A\$3m in incremental cost savings it expects this year plus another A\$7m in EBITDA from transitioning its existing leasing clients in Australia to its own book. The ROE of the leasing business is 55%.

Valuation / Risks to our View: Our Dec-14 price target is \$1.05/share (based on our DCF valuation). Risks include lack of availability of debt for the finance business; exposure to key suppliers, including Canon Australia and Konica Minolta; competition driving irrational pricing; and unfavourable AUDNZD movements.

CSG in a Nutshell: CSV is 24 months into a five-year turnaround plan with targets focused on restoring revenue growth and implementing cost savings. Whilst this is in train, the company has committed to returning 9cps to shareholders over the medium-term in the form of dividends and capital returns

CTT – Correios de Portugal (CTT PL/N/€7.09)

Yield play geared to Iberian recovery/expanding financial service portfolio

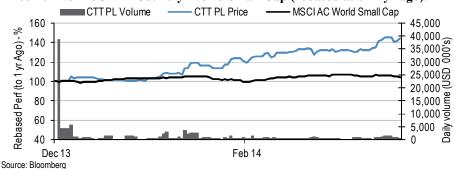

Investment Highlights:

- CTT has a min dividend payout strategy of 90% with mgmt expecting 2013 divs of €60m (5.5% vld). We estimate €93m FCF in '14 (8.6% vld. 1.2x FCF/Div cover). CTT has the lowest leverage in its peer group with €1.65/sh in net cash (more than offsetting the €1.40/sh net benefit liabilities, with potential to transfer €180m healthcare benefit liabilities to the Portuguese state).
- While trad mail volumes are declining, CTT has tools to offset this through: i) cost reduction — €70m savings achieved '09-'12, est €40m for '13-'15, €18m of which already seen in first 9mths of 2013; ii) non-mail growth — exposed to long term parcel grw trends in a region hit by recession and where e-commerce grw lags neighbours (online sales just 2% in Iberia vs EU avg 8% and ~10% in UK).
- There is potential for CTT to expand its financial svcs portfolio with other lowrisk, fee-based revs by leveraging the retail network (eg govt savings products. expansion into consumer credit/banking mkts, provision of State services) — in Jun '14 CTT announced the formalised 5yr tie-up with BNP Paribas Personal Finance governing the launch of consumer credit products. CTT also recently acquired a provisional banking licence, & generates 7% of revs from advertising (a mkt we believe has troughed).

Valuation / Risks to our View: Our €8.25 PT is based upon a year-end 2014, DCFderived estimate. We employ a WACC of 7.8% and terminal growth of -3% (while relatively small operating lease commitments are capitalized at 6.5%). Key downside risks include: the pace of secular mail volume decline; the rate of e-commerce expansion in Iberia failing to match further developed neighbours; fiercer than expected parcel market competition; risks associated with potential entry into new business areas; regulatory and financial risks; rising inflation.

CTT in a Nutshell: CTT is the incumbent postal operator of Portugal and the dominant provider of traditional letter mail, advertising and newspaper & magazine subscriptions. These account for ~60% of CTT's EBIT and are supplemented by feebased financial services revenues (30%), as well as a parcel delivery network that is the largest in Portugal and extends into Spain (<10% of EBIT). CTT has a network of 2,518 postal points, 625 of which are company-owned, and it has 3,915 Payshop locations. The State of Portugal owns 31.5% of the company.

EnQuest (ENQ LN / OW / GBp140.4)

Project delivery the key to re-rating

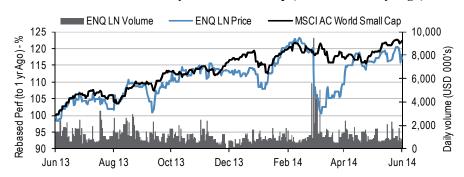

Investment Highlights:

- Despite production that could more than double between 2012 and 2017 (from 22.8 mmboe to 50.0 mmboe JPMe) EnQuest trades on a P/E JPM 14E of just 9.1x, with 55% potential upside to our Risked NAV (DCF-derived Core NAV of £1.68/sh plus exploration and appraisal upside of £0.50/sh).
- We believe its net cash position, strong cash flow generation (\$629m in 2013) and focus on production rather than exploration limit the risk profile.
- Project execution remains an important trait of the company, and there remain potential tangible catalysts in the near term even after the approval of the Kraken project: 1) First oil on the Alma/Galia development still scheduled for 2H14, with much of the in-field infrastructure in place; 2) Appraisal well at Cairngorm, started 4Q13; 3) Potential operational and development opportunities arising from the recent acquisition of a 50% interest in the Greater Kittiwake Area in the North Sea; 4) Exploration potential at Avalon in the UK & SB307/308 in Malaysia.
- Geographical expansion brings another avenue of growth moves into Egypt, Malaysia and Tunisia are part of a strategy of taking small steps to expand internationally. The assets are in proven hydrocarbon basins, with the potential to extend field life or develop marginal/fallow discoveries.

Valuation / Risks to our View: Our core NAV is DCF-based, based on commercial assets. Risked NAV (RENAV) includes value for exploration and appraisal upside, taking into account the risk of achieving it. We base our Dec-14 PT of 185p around 2014E RENAV, +/- a premium/discount for factors such as diversity of drilling programme and mgmt track record. Key risks include: 1) Oil price (ENQ has above average gearing); 2) Project execution; 3) UK fiscal risk (~100% exposure to UK North Sea); 4) Exploration disappointment; 5) 3rd party infrastructure downtime. EnQuest in a Nutshell: ENQ is a development-focused E&P company focused on the UK North Sea. Mgmt's emphasis on operational excellence and project execution

EnQuest in a Nutshell: ENQ is a development-focused E&P company focused on the UK North Sea. Mgmt's emphasis on operational excellence and project execution differs from the majority of UK E&P companies with an exploration bias. ENQ has two major projects coming on-line in the coming yrs; Alma/Galia (2H 2014) and Kraken (2016). These projects underpin a medium-term growth strategy which should provide the company with strong cash flows in a high oil price environment.

Even (EVEN3 BZ / OW / R\$6.57)

Improving results at an attractive valuation

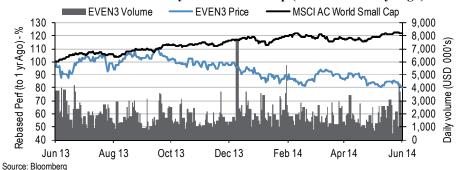

Investment Highlights:

- Improving ROE in the short term, after a weak 1Q with ROE at only 11% we expect Even to report an ROE of 14-16% in the coming quarters on the back of higher revenues recognition, leading to higher margin and higher asset turnover.
- Premium execution. Even always grew organically, avoiding the pain of M&A process, moreover Even was always focused on the mid and high income segment have a deep expertise on the sector and not historical of cost overrun.
- Strong balance sheet with +FCF, Even has one of the lowest leverage ratios in the sector with Net debt to Equity at 50% vs up to 150% from peers that traded at discounted valuations. We see a +FCF of R\$200mn this year (9% of its equity).
- Attractive valuation, as the company is trading at 0.8x current P/BV for an expected ROE of 16%, this compares with peers' valuation of around 1.0x P/BV for ROEs of 14-15%, leaving room for an catch up in valuation.

Valuation / **Risks to our View:** Our YE14 PT of R\$10.00, is derived from the average a GGM-based valuation and a DCF valuation. For the GGM, we assume a COE of 13.2% and a sustainable ROE of 16%. In our DCF, we assume a WACC in US\$ of 11.7% based on a Beta of 1.3, country risk of 2.5%, risk free of 3.0% and an equity risk premium of 5.5%. The main downside risks are: i) Sale speed of inventory; ii) deterioration on São Paulo and mid income market; iii) changes in management team.

Even in a Nutshell: Even is a Brazilian Homebuilder, focused mostly in the city of São Paulo and metropolitan region, developing mid-class projects with average ticket around US\$200-250k. Even was founded in 2002 after the merger between ABC Investimentos and Terepins & Kalili, and in 2007 the company made its IPO and has been part of Bovespa's Novo Mercado (highest level of corporate governance in Brazil). Currently the company has a share of 0.5% on IBOV index.

Faurecia (EO FP / OW / €27.98)

Margin expansion on track

Investment Highlights:

- Rerating potential rather than Recovery play: Trades on a P/E 14E of 17.5x with ND/EBITDA of 1.2x and '14/'15E EPS Grw of 151%/44% (JPMe), offering re-rating potential without relying on strong economic recovery in our view.
- Helped by restructuring: We expect Faurecia to post cost savings of €40m in Europe and €10m in North America this yr, followed by another €20m in 2015E, driving EBITDA margins from 5.9% in 2013 to 7.9% by 2015E, taking EBITDA up 50% over the next 2 yrs, and leaving it with an EV/EBITDA of 3.8x (vs the company's hist avg of 4.5x).
- In an industry with structural tailwinds: Faurecia today operates in a very different environment to that before the crisis. With around one-third of suppliers squeezed into bankruptcy, the structure of the industry has changed to include more stable margins, longer contracts, a more flexible cost structure, and the ability to pass on raw material costs from sub suppliers to OEMs, making suppliers somewhat immune to raw-material inflation.
- A solid balance sheet with FCF generation: Faurecia's ND/EBITDA stands at 1.2x, falling to 0.7x by 2015E given the €395m in FCF which we believe the company could generate over the next 2 yrs.

Valuation / Risks to our View: Our Dec-14 PT of €36 is based on an FY15E EV/Sales multiple of 0.3x, given our forecast for operating mgns of 4.0% in FY15 (in line with hist multiples when delivering similar margins). Keys risks include: weaker than expected light vehicle production volume growth; production growth underperformance in Europe / US; Faurecia's ability to continue outperforming mkt grw in Asia; the pace at which Faurecia can consolidate its business in N. America.

Faurecia in a Nutshell: Faurecia is the 3rd largest auto supplier in Europe (6th globally) and is a key player in each of its core businesses: Automotive Seating (#3 globally), Emissions Control Technologies (#1), Interior Systems (#1) and Automotive Exteriors (#2). It is active globally, with a network of 320 production sites in 34 countries (1/3 of these are located in the immediate vicinity of the customers' assembly lines, the remainder sited for supply chain cost efficiency).

Gameloft (GFT FP / OW / €6.60)

Playing online & mobile structural growth

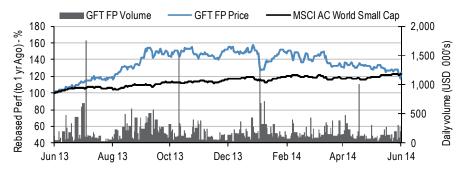

Investment Highlights:

- **Positive industry trends:** adoption of mobile devices should continue to fuel growth for Gameloft (700m smartphones sold in 2012 vs 490m in 2011) with low-end smartphones/tablets being a potential driver in 2014. While barriers to entry appear low, Gameloft's sheer size, global reach, and 14-yr experience across mobile and fixed devices should enable it to remain an industry leader.
- Significant potential growth and margin expansion: mgmt guidance calls for 2014 grw in sales, profitability and net cash, with consensus estimates calling for net income to more than double from 2013 to 2016 (thanks to a 14% top-line CAGR and 580bps expansion in EBITA mgns up to 80% of costs are fixed and developer workforce is right-sized for now).
- Attractive valuations: Bloomberg consensus estimates, a P/E and FCF Yld of 26.9x and 6.5%% in 14E, and 19.0x and 7.0% in 15E, respectively.
- Strong balance sheet: Consensus estimates a net cash position of €102m by 2015 (18% of current mkt cap), while mgmt showed willingness to return cash to shareholders through a 1.5m share buyback plan in 2013.

Risks to our View: Key Risks: a) Maintenance of partnerships with digital stores (Apple App store, Google Play) and establishing new partnerships; b) Increasing concentration of competition; c) Technological changes might require significantly higher R&D costs than currently forecast; and d) FX translation risk.

Gameloft in a Nutshell: Gameloft is a developer, publisher and distributer of games for mobile handsets (majority of sales) and other devices including set-top boxes, and smart TVs. The company's products are a mix of own franchises (~60% of sales) and licensing deals (Marvel, Hasbro, Disney, Mattel, etc). Europe makes up 30% of sales (NA another 30%). The co's games are available in 12 languages and 100 countries.

Gem Diamonds (GEMD LN/OW/GBp143)

A relatively safe play on positive outlook for diamonds

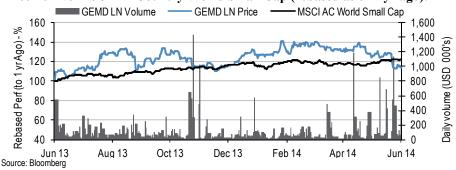

Investment Highlights:

- Q1 production & pricing solid: Letseng is tracking at 28% of our full-year '14 est of 92.9kct. Sales of 30.1kcts from the first three tenders of the yr were up 3% YoY, while avg realised prices of \$2,723/ct were up 70% YoY, 8% QoQ and 21% ahead of JPMe FY14 average due to a favourable ore mix and a solid underlying rough diamond mkt. End March consolidated net cash of \$89m, +\$18m QoQ, appears to be on track to meet or exceed our Dec'14 est of \$78m.
- **Ghaghoo commissioning on track:** the company reported solid progress at the Ghaghoo project in Botswana. The project remains on track to meet the H2'14 commercial production target, while capex appears to be in check with \$76.3m of the \$96m budget spent as of the end of March.
- Letseng coarse recovery plant expected in Q2'15: detailed design work has commenced and long-lead items have been procured for a new plant to treat the high value, coarse fraction of the ore at Letseng. The new plant will use X-Ray Transmissive technology to improve recovery of high value type II diamonds, as well as incorporate security improvements.
- Diamonds remain interesting: we continue to view diamonds as a play on late-cycle growth in emerging markets, especially China, with an increasingly middle-class consumer base driving jewellery demand, as well as ongoing recovery in OECD markets. Recent share price weakness also appears to be undeserved as press speculation of an imminent coup in Lesotho has so far proved unfounded.

Valuation / **Risks to our View:** We use $\sim 1.0 x$ our FY14E year-end NPV estimates to set a Dec '14E price target for GEMD at 200p (9% WACC, no terminal growth), in line with the methodology used across the sector. Key risks include: project and regulatory risk; project delays; cost inflation and FX; diamond prices; and funding.

Gem Diamonds in a Nutshell: Gem Diamonds Ltd produces high-quality rough diamonds from the Letseng mine in Lesotho, and markets them via tender in Antwerp. As well as rough sales, the company has small-scale downstream processing capacity, allowing it to cut and polish a portion of its production in-house to be sold in polished form. GEMD is also developing the Ghaghoo project in Botswana, with first output due mid '14.

Havas (HAV FP/N/€6.01)

Growth story with attractive FCF yield

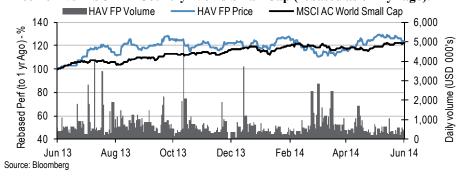

Investment Highlights:

- Good fit with our top-down views: The SMid Strategy team has maintained a constant OW on Media in recent years, considering Ad Agencies an attractive way to capture the growth inherent in the global digital revolution. We believe that the role of advertising agencies will have to expand as the barriers between mktg and technology continue to get more blurred, thanks to the growth in SMAC (social, mobile, analytics/big data, clouds) and e-commerce.
- Attractive valuation for the grw. The stock trades on a Fw P/E of 16.2x (IBES) for a stock that grew earnings every yr throughout the crisis at a rate of >10% /yr and for which IBES estimates forecast >10% CAGR from '13-'16E. At present, among European SMid-Caps, stocks with estimated 7% or better EPS growth and solid balance sheets are at present commanding an avg trailing P/E of >24x (Havas's multiple stands at 19.1x).
- Compelling FCF Yld story. Havas's FCF Yld stands at 4.5% for 2013A... moving to 7.2% in '14 on JPMe. Match this with its strong balance sheet (0.4x ND/EBITDA on JPMe '14E) and in our view, there is significant firepower for the company to create value for investors.
- Potential player in further industry consolidation. The termination of the PUB/OMC merger increased interest in Havas as a potential player in further industry consolidation (source: Reuters news article May 11th).

Valuation/Risks to our view: Our DCF-based Jun'15 PT is €6.7. Key risks to our view include: i) a quicker/slower improvement in European advertising trends than currently anticipated; ii) significant new business wins/losses; iii) value-destroying acquisitions; and iv) upside risks include a potential share buyback or special div.

Havas in a Nutshell: Havas is one of the world's largest global advertising, digital and communication groups, with two main business units—Havas Worldwide and Havas Media. Havas Worldwide includes the co's chief global advertising network, which offers a full suite of advertising and marketing services businesses, as well as some smaller local agencies. Media buying is handled by Havas Media, which includes Havas Digital, Media Planning Group (MPG), Media Contacts, and Arena.

Jupiter Fund Mgmt (JUP LN/OW/GBp 400.7)

Increased capital return warrants a re-rating

Investment Highlights

- Jupiter's long-term investment track record and strong brand should serve it well in the retail savings market in the UK post the introduction of the Retail Distribution Review (RDR), in our view.
- In particular, the company's already successful Merlin Fund of Funds business should continue to attract material inflows, as we believe fund of funds is likely to be a beneficiary of changes in the nature of financial advice offered. In addition the company is expanding its international distribution capabilities, having previously concentrated its efforts within the UK.
- Jupiter has traded out of the need for its consolidated capital waiver, and has a sufficiently prudent buffer to operate at similar capital levels in future. With the last of its debt repaid in February, we believe that shareholders stand to receive a materially improved proportion of the company's generated cash.
- As a result we expect ordinary dividends to be supplemented by additional capital return from the end of this year. We have assumed that the payout ratio for the ordinary div is maintained at 50%, yet see opportunity for the co. to distribute a further £117m of its cash to shareholders over the next three years. This implies total payout ratio of 80% by 2015E, which may prove conservative we believe.
- The prospect of 6% dividend yield and double digit EPS growth is compelling we believe, and may result in a re-rating of the shares.

Valuation / Risks to our View: We determine our PT using relative fwd PERs, comparing the co with a broad peer group and taking into account factors such as profitability & balance sheet structure. On this basis, we assume a 20% premium valuation to the sector (13.7x) to derive our Dec '14 PT of 474p. As with any asset manager the salient risk to our investment thesis is a different outcome for mkt levels compared with our ests. This would inevitably affect AUM, but also potentially ests of future flows, with consequences for group's revs. The bus. model has inherently high operational gearing, so the effect on profits would be more pronounced.

Jupiter in a Nutshell: Jupiter is a focused, active fund manager with a well-known brand and an established track record, seeking to add value for clients through the delivery of investment outperformance over the medium to long term. It is primarily an equity investor but with a growing presence in fixed income.

Laird (LRD LN / OW / GBp 288.0)

Operational gearing crucial to achieving estimates

Investment Highlights:

- Apple's launch of the iPhone 5S and 5C was good news for Laird. Apple is Laird's largest customer and we believe that Laird was contracted to supply EMI shielding on the latest iPhones. This, together with the launch of the Xbox One in Nov '13 underpinned the significantly stronger 2H13 (profit 2x 1H level) mgmt continues to expect its earnings to accelerate as we progress through 2014 and to be weighted to the second half, and we anticipate a similar H1/H2 split to 2013 driven by increasing demand for EMI products from Apple and Samsung as well as a new telematics contract and increased LTE/MIMO activity contributing to Wireless Systems. Laird's revenues can be impacted by variations in the level of orders from key customers, but we note that its success is built on the longevity of relationships with some of the largest manufacturers in the world.
- We believe Laird aspires to broaden its EMI and thermal businesses by increasing its penetration of other smartphone and tablet manufacturers. As the global mkt for tablets becomes increasingly fragmented, we expect opportunities to arise for Laird to work with smaller players in this space. Laird is developing a manufacturing facility at Hanoi to supply EMI products that will work alongside a design facility in Seoul — potentially to supply a major South Korean customer.

Valuation / Risks to our View: Our Mar-15 PT of 340p is a 50:50 weighted avg of our DCF and SOTP valuations. Our SOTP is based on 14.5x EV/EBIT FY14E, a 10% discount to peer grp avg. Risks include: key customer risk; FX transaction and translation exposure; limited visibility; competition encouraged by OEMs; reliance on manufacturing in low cost countries reduces ability to further mitigate price deflation in its mkts — greater than expected infl (esp in China) could negatively impact profitability; ability to get Laird's products onto next gen OEM products.

Laird in a Nutshell: Laird designs and manufactures technology that protects electronic devices from electromagnetic interference and heat, and that enable wireless and antenna-based connectivity. It operates from 46 engineering, manufacturing and sales facilities around the world, including 20 research laboratories, and employs 9,000 people. The business was established as a Liverpoolbased shipbuilder in 1824 and had a long history as an industrial conglomerate before coming to focus on electronic protection and connectivity technology in the 2000s.

Global Equity Research

J.P.Morgan

M6 (MMT FP / OW / €14.67)

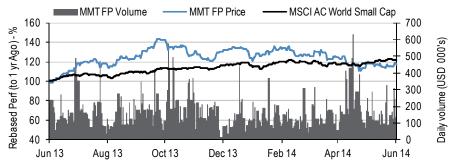

Investment Highlights:

- A good fit with Strategy focus on potential rerating: We forecast grw of >16% in 2014/2015, and hence estimate M6 is the cheapest FTA operator in Europe on EV/EBITDA (4.8x/4.4x), P/E (13.8x/11.8x), FCF Yld (7.8%/8.0%) and Div Yld (6.1%/7.1%) — all well below hist avgs (35%/45%) below in the case of P/E).
- In an industry benefitting from a structural growth driver, highly exposed to a Eurozone recovery: We continue to believe that we are facing a multi-yr trend of rising advertising and selling spend as GDP grw remains anaemic, forcing corporates to buy and compete for mkt share. It seems that the worst is behind us and we expect good positive grw in Western Europe in '14/'15 (+2.4%/+3.4%).
- Well positioned in a competitive environment: The solid mgmt team has kept profits more resilient than peers by avoiding loss-making diversifications, gaining mkt share through an aggressive pricing policy, and maintaining a lower programming cost base (2013 operating profit was 15% below peak, vs TF1 -42%, A3M -81% and TL5 -84%). We believe M6 is likely to continue taking mkt share from TF1 in 2014.
- Non-consensus investment opportunity: Of the 21 analysts covering the stock, only 8 rate it OW.

Valuation / Risks to our View: Our Dec-14 PT of €21.40 is DCF-based. Key risks include: i) lower than expected advertising revenues; ii) operating costs, in particular programming costs, differing from our expectations; and iii) value-destroying or enhancing acquisitions.

M6 in a Nutshell: Metropole Television (M6) owns and operates the French FTA TV channel M6 as well as other FTA and pay TV channels. Other lines of business include Broadcasting Rights - SND (acquisition, management and distribution of copyright), M6 Video and M6 Studio (development and production of animated features) — and Diversifications (brand licensing, music, e-commerce and others).

Makalot (1477 TT / Not Covered / NT\$160.5)

Investment Highlights:

- Proxy of US economic recovery & Trans Pacific Partnership agreement (TPP). With 85% revenue exposure in the US, the company is a proxy of the US recovery over 90% of production capacity in ASEAN and 26% in Vietnam. The Vietnam textile industry predicts that Vietnamese garment exports to the US will grow at a CAGR of 14% to 2020, with Makalot's mgmt forecasting a doubling of shipments from Vietnam from '14-'17.
- Adding new customers on top of growth from existing customer base. Besides strong order placement (+20% Y/Y) from existing US customers, Makalot has started shipping garments to Fast Retailing, H&M, Ralph Lauren and UnderArmour. The company expects revenue momentum to accelerate from 2H13, driven by ~c.20% Y/Y in shipments and ASP hike.
- Margin expansion targeted by mgmt in 2014. Makalot is attempting to raise
 profitability and aims to expand gross margin by 1 percentage point per annum
 from 2013, through better operating efficiency and growing economies of scale.
- Valuations: JPM does not cover this stock and thus we have no recommendation or price target on the company. According to IBES ests the stock trades on a P/E of 15.8x/13.6x for '14/'15 respectively, with a 4.9% FCF Yld in '14 rising to 6.8% in '15.

Makalot in a Nutshell: Makalot is one of the major apparel ODM/OEM companies in Asia and supplies mass market garments to Kohl's, Target, Carter's, H&M, Fast Retailing, and Zara. Around 85% of its products are sold in the US and 93% of its production facilities are located in South East Asia.

Media Prima (MPR MK/N/ M\$2.61) Dominant market position with attractive yield

Investment Highlights:

- **Dominant media company across five platforms:** Media Prima's dominant mkt position across television, print, radio, outdoor and online media in our view makes it an attractive longer term proxy to the rising middle class population, with Malaysian advertising expenditure having risen every year since 1998.
- **Encouraging adex trends:** Media Prima recorded Jan-May-14 free TV adex growth of 5%Y/Y and total adex for the print industry rose 9%Y/Y. However, with the prospects for more subsidy cuts and rising cost in Malaysia, we maintain our more cautious FY14E adex growth of 5%Y/Y for MPR, implying a 0.9x GDP growth versus 1.2x-1.8x historically. Expect near-term FY14E earnings to also be flattish on higher newsprint and content costs from a weaker ringgit.
- Higher dividend payout guidance of 60%-80% should provide support, translating to 5.0%-6.6% div. yield for FY14E vs our base case assumption of 5.7% at current levels. The company is in a net cash position, with an FCF yield of 11%-12%, and is currently trading on a FY14E JPME P/E of 13.4x vs historical mean of 14.4x, and versus 23.4x for Asian regional peers.
- Valuation / Risks to our View: Our Dec-14 price target of M\$2.80 is based on a 20% discount to our SoTP of: 1) DCF value of media business; and 2) cash balance and cash proceeds from warrant conversion. Our PT implies a FY14E P/E of 14.7x, or close to its 5yr mean of 14.4x. Key risks include: 1) Sharp downturn in the economy as adex spend is highly leveraged to GDP; 2) Stronger than expected competition from the pay-TV segment and new players; 3) Slower than expected consumption and hence adex growth from gradual subsidy removals and rising costs in Malaysia.

Media Prima in a Nutshell: Media Prima is the sole integrated media investment group in Malaysia, with a reach across television, print, radio, outdoor, as well as online media. Media Prima is also involved with content creation, event and talent management. Media Prima has a dominant market leadership in television and a solid foothold in the fastest growing Malay newspaper segment with its "Harian Metro".

Mediobanca (MB IM/Not Covered/€7.82)

Investment Highlights:

- A good fit with our SMid strategy views: MB represents exposure to a # of our OW themes this yr (i.e. Cont. Europe, Periphery, & our preference for "Rerating" vs pure "Recovery" plays... one of few banks left <1.0x P/TBV).
- Risk profile limited by resilient operations and sound Core Tier1 ratio. Revs in all business areas are up or flat from Jun '07 levels, which has enabled the company to avoid raising capital and afford a grw mentality (headcount up ~20% 08-13). MB's B3 CET1 is already >10%, NPL ratio is 5.4%, & NPL coverage ratio is 46% (despite provisioning rules in Italy being strict, not taking into account Guarantees or Collateral in their definition of NPLs).
- A Grw Mentality/Reality. MB's 14-16 business plan calls for investment in fee-generating/capital light businesses and significant grw in non-domestic revenues 10% rev CAGR, 10-11% RoE, B3 CT1 of 11-12%, payout of 40%.... with fee income up from 25% of total income in '13 to 40% in '18 (WM being 15% of rev by then). In recent yrs MB expanded its operations to include: a) Intl expansion of IB bus., b) a leading domestic consumer lending business ('07 acquisition of Linea + '14 distribution agreement with MPS... mkt sh in new loans up from 6.6% in '09 to 11.4% in '13), and c) a retail banking franchise renamed CheBanca in '08... deposits up 13% and total income up 34% YoY in 1H14. MB claims the IB fee pool grew 20% in EMEA in Q413; we expect a wave of M&A/ECM in EU.
- And all at discount valuations: JPM does not cover this bank and thus we have no recommendation or price target on the name. According to Bloomberg, the bank is trading at a P/TBV of 0.89x, and a P/E 14E of 14.3x. JPM's bank coverage only has 10 banks in W. Europe trading below TBV and most have higher P/Es while all have lower Core Tier 1 Cap ratios. MBs 14-16 business plan calls for the disposal of €1.5 Bill of equity stakes, MB has a 40% planned payout ratio, and it has returned €2.5 bn to shareholders (divs + buy-backs since '05).

Mediobanca in a Nutshell: Mediobanca is Italy's leading IB with a 60-yr history and a pole position in the country's M&A league tables. Beyond its Italian CIB operations (45% of MB's 13 revs), MB's business includes Retail & Consumer (54% of revs), and Principal Investments (with a current mkt value of €4.9 Bill (13.2% stake in Generali, 4.5% stake in Pirelli, 13.9% in RCS, etc).

Nihon Kohden (6849 JT / OW / ¥4,945)

Expanding globally with electroencephalography devices and patient monitors

Investment Highlights:

- Nihon Kohden has the top global market share in electroencephalography devices and it has gained market share among the top 50 hospitals in the US, an area of focus for the company, while building strong relationships with prominent hospitals and doctors. This, in turn, has enabled the company to be successful in developing countries as well. We expect the company to leverage its proprietary sensor technology to strengthen its competiveness.
- The co. aims to catch up with rivals Philips and General Electric in the patient monitoring business by gaining a foothold in the US mkt with its line of Prefense patient monitors. Package orders remain strong and the co. is making steady progress toward reaching double-digit mkt share with global new product launches.
- In the Japanese market, we expect the company to benefit from the allocation of government funds to revitalize regional healthcare systems and continued upgrading of the capabilities of hospitals, resulting in strong growth in sales of a wide range of products, including clinical testing equipment.
- The company's medium-term business plan targets FY2016 sales of ¥170 billion and operating profit of ¥18 billion and FY2019 sales of ¥200 billion and operating profit of ¥25 billion. Based on recent trends, we expect the company to reach its profit targets ahead of schedule.

Valuation / Risks to our View: Our Dec-14 price target is ¥6000, based on a one-year forward P/E of 20x. Risks include a decline in hospital capex resulting from an economic slowdown.

Nihon Kohden in a Nutshell: Nihon Kohden is the top global company in electroencephalography devices and its main business is patient monitoring systems for hospitals. The company controls an overwhelming market share in both of these businesses in the Japanese market and is expanding globally by launching a wide range of testing equipment, including automated external defibrillators (AEDs).

Novatek Micro (3034 TT/OW/NT\$138.50)

With the favorable backdrop of driver IC (DDIC) inventory digestion bottoming out and resolution upgrades for smartphones (HD 720/Full HD) picking up pace, we see Novatek propelling into the second-leg of its earnings up-cycle. Compared to the previous up-cycle (2H12-1H13), where grw was largely led by smartphones and tablets, we think the upcoming one will have more legs given 4K2K TV penetration is tracking ahead of expectations, and market share gains seem to be coming through for Novatek's TV SoC and 4K2K upscaler chips. **Investment Highlights:**

• Full HD firing engines now, WVGA pains to be soon forgotten: Novatek's leadership in Full HD didn't bear much fruit in 2H13 with WVGA remaining mainstream and suffering intense pricing pressures will all fabless competing on market share. With significant pick up seen in Full HD/HD 720 adoption and our expectations of this segment to exceed 50% of the smartphone shipments by end-14, we expect Novatek's blended small DDIC ASP to

grow by 28% Y/Y this year. Moreover, competitive landscape at Full HD remains favourable as competitors have limited products under mass-production at present.

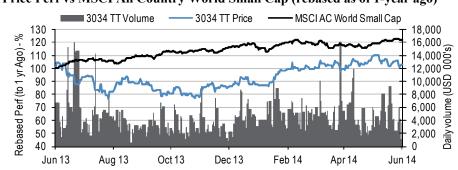

• TV SoC and 4K2K TVs also join the party: With several tier-1 brands on board now, we expect Novatek's foray into TV SoC chips to finally bear fruit in '14/'15, more so thanks to recent completion of M&A between two dominant players in Taiwan. This, coupled with rapidly growing 4K2K TV penetration and Novatek's recent design wins for 4K2K upscaler chips, should translate into new growth drivers for the company.

• Sequential earnings to persist in 2014 regardless of seasonality: Historically, Novatek's stock has shown strong correlation with its qtrly earnings trend. We believe the 2nd leg of earnings cycle has begun, as we forecast Novatek's earnings grw, beginning in 1Q, will persist into 2014 regardless of seasonal volatility and drive the stock higher, while a steady dividend may act as downside hedge.

Valuation / Risks to our View: Our Dec-14 price target of NT\$180 is based on 15x average of FY14 & FY15 EPS, corresponding to higher-end of its mid-cycle valuations. Key downside risks to our view include: 1) Further margin squeezes in the China smartphone market, 2) Further delays in Full HD smartphone driver adoption in China and 3) Intensification of competition in TV SoC space.

Novatek in a nutshell: Novatek Microelectronics is the 2nd largest fabless IC design company traded on TWSE with its business focus on flat-panel display driver ICs, SoC solutions and services.

Omantel (OTEL OM / OW / RO1.62)

Attractive divi yield of >7% supported by strong FCF yield of >10%

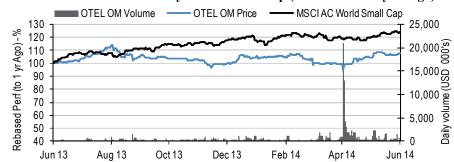

Investment Highlights:

- Attractive divi yield of >7%. Based on our current estimates, Omantel offers an attractive 2014E/15E divi yield of >7%. Our dividend expectations are supported by strong FCF yield of >10%, reasonable divi pay-out ratio of <75% of NI and comfortable debt position (2014E Net Debt/EBITDA of -0.4x).
- Currently better positioned to benefit from broadband-driven growth. This is mainly due to Omantel's relatively large fixed network and more comprehensive mobile broadband network.
- Gov't's sale of 19% through the stock market beneficial for stock liquidity. Our initial view is that this is a positive development as the free float almost doubles to 39% from 20% and is likely to benefit stock liquidity.
- **Key positive catalysts.** We highlight earnings, dividend announcements, and potential IRU sales (which we do not forecast) as key catalysts.

Valuation / **Risks to our View:** We are OW on Omantel with a DCF-based SOTP Dec-14 PT of RO1.77. Competition, cannibalization of traditional rev and slower-than-expected turnaround of WorldCall ops are key downside risks.

Omantel in a Nutshell: Omantel provides integrated telecom services in Oman and at YE12 Omantel's mobile and fixed customer market share was ~55% and 85%, respectively. Omantel also provides telecommunication services in Pakistan and Sri Lanka through its subsidiary Worldcall Telecom Ltd. Omantel is currently 70% directly owned by the Government of Oman. Foreign investors can own up to 49%.

Pirelli (PC IM / OW / €11.80)

Possibly the last margin expansion opportunity in European tyres

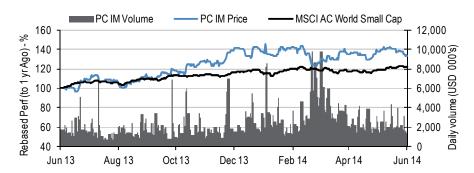

Investment Highlights:

- Non-consensus affordable growth with sustainable high FCF Yld. P/E 14E of 14.4x while consensus (IBES) calls for EPS Grw >10% for the next 3 yrs (45% in 2014), and a FCF yld 14E/15E of 7.6% and 8.7% respectively (JPMe) undemanding estimates as factoring in company guidance of ~€400m/yr capex (1.3x D&A). 11 of the 19 covering analysts rate the stock UW or N.
- Growth/Rerating potential not dependent on significant acceleration of the economy. The EPS growth story primarily driven by an efficiency plan that aims to deliver €350m from '14-'17 - ie doubling earnings. Combined with the stabilization in the European and Brazilian mkts, growth in the replacement tyre mkt, the improving business mix and a Russian business quickly ramping up, we believe Pirelli is the last and biggest European tyre rerating story for the foreseeable future, with sustainable and achievable EPS growth ahead.
- Attractive potential upside to peer rating. Placing a 1.4x EV/Sales multiple (our estimate for Continental's tyre division) on Pirelli's 2015E sales implies a share value of €18.00 — 53% potential rerating from current levels.

Valuation/Risks to our view: Our Dec-14 PT of €13.50 is derived from an EV/Sales multiple based on our tgt multiples for peers such as Michelin and Continental's tyre division — we value Pirelli at 1.1x '14 EV/Sales generating 14.4% FY14 EBIT (prerestructuring) mgns vs Michelin at 0.9x on 12% mgns / Continental's tyre division at 1.3x on 18.8% mgns. Risks include: worse than expected volume grw in Europe, N. America and S. America in light vehicle & truck tyre replacement mkts; increasing raw material costs; downside risk to next 3yrs cost savings; possible FX headwinds.

Pirelli in a nutshell: Pirelli is the 5th largest tyre maker by revenues, focusing on the high-end segment of the mkt (and the winter tyre segment through its Russian JV). Passenger car & motorcycle tyres make up 70% of sales with the balance industrial (13% agricultural, 88% trucks). Replacement tyres make up 75% of sales (25% OEMs). The co has 22 factories on 4 continents, with Europe making up 37% of sales, S. America 34%, NAFTA 12%, MEA 9%, and Asia-Pac 7%.

Prosegur (PSG SM / N / €5.24)

Trading performance better than share price performance

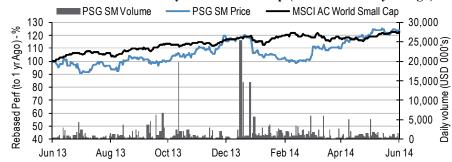

Investment Highlights:

- A strong fit with our focus on "Affordable Growth": The stock offers 5% upside potential to its hist. avg. fwd P/E (16.9x vs 17.7x IBES ests) while operating not only in a defensive industry but with significant geographical diversification. Sales actually grew through the downturn (by 19% from '07-'09), and have continued to grow since.
- Strong Balance Sheet and Consistent FCF Generation: We forecast Net Debt/EBITDA 14E (JPMe) of just 1.2x post-Chubb Security acquisition, offering scope for further accretive acquisitions. The company remained FCF positive throughout the cycle and both JPMe and IBES ests forecast FCF Ylds >6% through 2014.
- Room for sentiment to improve: The stock is a consensus UW, with only 6 of the 18 covering analysts rating it OW. We believe the stock has been unfairly penalized for its Spanish listing, Iberian exposure and short-term issues in LatAm (e.g. lag in passing on regulatory wage increases in Brazil and political disturbance in Brazil).

Valuation/Risks to our view: Our Dec-14 price target of €4.31 is based on a 2014E PER of 13.7x (a discount to the Business Services avg of 17.8x, but reflective of the lower returns from the security sector vs other Business Services stocks). Key downside risks include: a) further slowdown in the Spanish & Portuguese economies which would impact Prosegur's revenues there; b) general sentiment towards Spanish listed stocks being affected by market sentiment towards the solvency of the country.

Prosegur in a Nutshell: Prosegur is a security company based in Madrid and is focused on the Spanish and Portuguese-speaking markets. Europe & Asia account for 40% of revenue and 13% of EBIT with Spain, France and Portugal the main countries. LatAm accounts for 60% of revenue and 87% of EBIT. PSG is involved in all areas of security, inc. manned guarding, cash management and electronic security.

Quintain (QED LN / OW / GBp 88.25)

Last chance to get your ticket to Wembley

Investment Highlights:

- Ouintain offers one of the largest discounts to NAV in the sector: Our estimate of £1.39 in NAV for 2015 implies 58% upside. The Keystone JV for Wembley PRS development highlights the value case, with £9.1m / acre paid for residential development land vs BV of £6.5m/acre (47.8 acres, 70% residential).
- A solid Balance Sheet: The sale of Greenwich also meant that LTV for Ouintain dropped from 45% to 25%. With the company guiding to a sustainable debt level of 30%, its new LTV ratio means Quintain has £100m of firepower with which to bring additional value to shareholders
- With a blue sky PT of £1.50 (70% implied upside). The £1.50 bull case is based on a £600 psf average selling price (in other words, £420K for a 700 sq ft two-bedroom unit, which is still within the Help to Buy scheme). The first stage of sales at Wembley have already achieved an avg selling price of £570 psf.
- Additional opportunity for private rented sector (PRS) development that could be worth 5p p/s by 2014 (not currently in our figures).

Valuation / Risks to our View: Our 130p Jan-15 PT is based upon our total returnsbased European Valuation Model, which takes into account whether a company creates or destroys value. For Quintain, we calculate a value creation spread of -1% between our forecast total return and our WACC estimate, which we apply to the invested capital, discount back, and add/subtract to our NNAV forecast to derive our price target. Downside risks include worse than expected capital growth for commercial & residential property, worse than expected movement in the land prices, lower than expected house price inflation and/or slower than forecast sales of residential units.

Quintain in a Nutshell: Quintain is a London-focused developer and property fund manager. The portfolio is dominated by its large urban regeneration project at Wembley, which is expected to deliver c. 3,900 homes and 2.7 m sq feet. While this development value is realised, operating expenses are being paid for with income from the fund management business (now ~34% of company revs).

Salzgitter (SZG GY/OW/€30.70)

Investment Highlights:

- Benefits from potential macro tailwinds, self-help and tax-loss carry forwards. The JPM Economics team forecasts accelerating growth in the Eurozone, UK, US and broader DM in 2014, while we believe the 30-yr gas supply agreement between Russia & China should take a large capacity of large-diameter pipes & potentially heavy plates out of the mkt with a positive impact on prices. SZG's '13-'16 cost-cutting plan tgts ~€200m of expected savings, 30% of which should hit the P&L in each of the next 3yrs. In addition SZG has €1.5bn in tax loss carry fwds, implying a potential benefit to earnings of €200m (€4/sh).
- Solid balance sheet: Net cash of €125.6m (6.7% of mtk cap), with working cap (net of pension liabilities of €2.1bn and LT provisions of €316m) at €226m.
- FCF turning positive and meaningful. While consensus remains bearish on SZG (24/32 are UW/N), IBES ests call for FCF to turn positive this yr (+1.8%), rising to 7.9% in 2015.
- At what appear to be undemanding valuations. Salzgitter trades on a P/B of 0.53x, well below its '07 peak of 2.0x. Similarly, the stock price is down 80% from its '07 high, having significantly underperformed vs the MSCI Europe SC index (+5% from '07 peak).

Valuation / Risks to our View: Our Jun-15 TP of €38.5 is based on a 6x EV/EBITDA multiple on JPM 2015E, in line with 6yr hist avg. Key risks include: weaker-than-expected demand for steel in Europe and Germany, in particular; a return of substantial import volumes in Europe or the US; steel prices & shipments could be worse than forecast; delayed recovery of demand for steel and large diameter pipes projects beyond our '14E assumption; weaker-than-expected recovery of the industrial & commercial construction sector; weaker-than-expect'd recovery of late cycle business (large diameter pipes).

Salzgitter in a Nutshell: The management holding company Salzgitter AG coordinates the five business units: Trading, Strip Steel, Plate/Sections, Technology and Energy, and is one of the largest steel producers in Europe. The company was listed in 1998 having been spun out of Preussag Stahl AG, but has its origins in the Ilseder Hutte Corporation founded in 1858.

Synaptics Inc. (SYNA US / OW / \$89.38)

Leading supplier of touch solutions

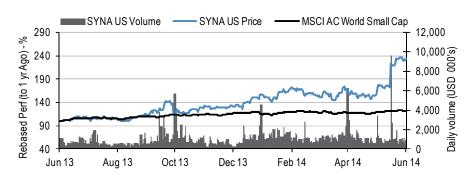

Investment Highlights:

- SYNA is the leader in touch solutions for the high-end touch market with design
 wins with major handset OEMs including Samsung, HTC, Motorola, Sony,
 Nokia, Amazon, and LG. The company is also a leading provider of touch
 solutions into the Chinese handset market and has a dominant share of the PC
 touchpad market.
- Move to in-cell, on-cell and integrated display technology allows room for higher ASPs.
- Timely acquisitions (Renesas SP, and Validity) increasing the TAM and transition to TDDI. (touch, LCD, and biometric solutions in one chip)
- We believe the company is on track to achieve record revenue of \$938mm, or more, in FY14 or up 41% y/y

Valuation / Risks to our View: Our Dec '14 price target of \$98.00 is based on 16x our CY15E PF EPS of \$6.14 Risks include 1) global economy weakness and slowing demand for PC, tablets, and handsets; 2) intensifying competition owing to new entrants into the capacitive touch space; 3) OEMs taking capacitive touch production in-house; 4) new technologies disrupting the capacitive touch mkt; 5) integration risks related to Renesas SP acquisition 6) slowing rate of innovation in PC / handset mkt; 7) increasing operating expenses relative to expectations.

Synaptics in a Nutshell: SYNA develops custom-designed user interface solutions for laptops, PCs and peripherals, mobile phones, & media players that allow touch-sensitive positioning driven by finger motions. SYNA is the mkt leader in touch solutions with design wins at Samsung, HTC, Lenovo, LG, Blackberry, Nokia etc.

Techtronic Industries (669 HK / OW / HK\$24.35)

Home Depot strong, solid results give confidence

Investment Highlights:

- Home Depot (HD) 1Q results show continued strength in the US market. The solid 1Q15 (Feb to April 2014) results of Techtronic (TTI)'s largest customer, Home Depot, should continue to support the growth profile for TTI. HD commented that the slow start to Spring dragged down results with solid performance in non-weather affected areas. Overall HD remains positive on the overall backdrop for home improvement spending in the US and the durable nature of the home and the assets attached to it.
- **Higher wages an unwarranted concern.** A major supplier of motors for TTI is Johnson Electric (JE). JE had warned in May that FY Mar15 results may show a drop in operating margin for 2 main reasons which are: (1) the higher cost of wages in China, as well as (2) the commencement of operations of 3 new plants in Serbia, India and Mexico. This revelation by JE also dampened sentiment for TTI as they are n a related industry.
- Europe and floor care offer more upside. Sales to Europe grew 18% in 2HFY13 compared to 9% in 1HFY13. TTI has a lot more market share to gain in Europe, where its market share is much lower than in the US but its products are equally attractive versus incumbent peers. In addition, floor care sales grew 17% YY in FY13 globally compared to a sales drop in FY12. We expect margins to expand significantly in '14 as start up marketing costs fade for the new Hoover products.

Valuation / **Risks to our View:** Our PT (Dec-14, DCF-derived) of HK\$36 implies a fwd P/E of 20x (FY15E). The key risk to our PT are rising cost of production in China and a slower than expected recovery in US demand. Another risk is the implementation risk on new product introductions and whether or not they are accepted by customers.

Techtronic in a Nutshell: Techtronic was listed in 1990 and is one of the largest makers of branded power tools in China with over 70% of sales for the North American Market, Home Depot being the largest customer. Key brands include Ryobi, Milwaukee, AEG, Hoover and Dirt Devil.

Worley Parsons (WOR AU / OW / A\$17.3)

Clear path to medium term earnings growth with oil linkage

Investment Highlights:

- While near term Hydrocarbons capex growth remains subdued, the medium to long term trends remain intact. Continued growth in and industrialisation of major developing economies coupled with a recovery in economic activity in major developed world economies is likely to support further growth in demand for energy. Policy changes are also likely to favour a shift in energy demand. Finally, improvements in technology and the depletion of conventional resources are leading to an increase in production from unconventional sources.
- WOR's 20 Nov13 Trading Update highlighted a range of one-off, cyclical and structural issues impacting near term earnings as well as representing a medium term shift in revenues towards lower margin/higher risk works. We believe that this update finally led to a reset of consensus expectations around revenue growth and margin trajectory. As such, we believe that market expectations for WOR now better reflect WOR's operating model/structure and risk appetite going forward. WOR also retains a strong balance sheet position to support acquisitive/organic growth.
- WOR has had some success in securing new work in CY14 YTD. These wins have been spread across the breadth of front end project selection/design, project execution and project operations/maintenance/brownfield works. Moreover, we believe that these awards are providing an offset to the pullback WOR has experienced amongst its Minerals & Metals customers.

Valuation / Risks to our View: Our Jun15 price target of \$18.56 is based on the weighted average of our FY15E PE Rel, FY15E sum-of-the-parts and DCF valuations. Downside risks include persistent weakness in capex in the global energy and resources sectors, cost overruns/project issues on fixed price construction/fabrication work and strength in the A\$.

WorlevParsons Limited in a Nutshell: WOR is a global engineering firm with exposures to the global Hydrocarbons, Minerals, Metals & Chemicals and Infrastructure sectors. WOR delivers services from front-end design/development through engineering/construction/procurement to brownfield asset services.

Explanation of Equity Research Ratings, Designations and Analyst(s) Coverage Universe:

J.P. Morgan uses the following rating system: Overweight [Over the next six to twelve months, we expect this stock will outperform the average total return of the stocks in the analyst's (or the analyst's team's) coverage universe.] Neutral [Over the next six to twelve months, we expect this stock will perform in line with the average total return of the stocks in the analyst's (or the analyst's team's) coverage universe.] Underweight [Over the next six to twelve months, we expect this stock will underperform the average total return of the stocks in the analyst's (or the analyst's team's) coverage universe.] Not Rated (NR): J.P. Morgan has removed the rating and, if applicable, the price target, for this stock because of either a lack of a sufficient fundamental basis or for legal, regulatory or policy reasons. The previous rating and, if applicable, the price target, no longer should be relied upon. An NR designation is not a recommendation or a rating. In our Asia (ex-Australia) and U.K. small- and mid-cap equity research, each stock's expected total return is compared to the expected total return of a benchmark country market index, not to those analysts' coverage universe. If it does not appear in the Important Disclosures section of this report, the certifying analyst's coverage universe can be found on J.P. Morgan's research website, www.jpmorganmarkets.com.

J.P. Morgan Equity Research Ratings Distribution, as of June 30, 2014

| | Overweight | Neutral | Underweight |
|---|------------|---------|-------------|
| | (buy) | (hold) | (sell) |
| J.P. Morgan Global Equity Research Coverage | 45% | 43% | 11% |
| IB clients* | 55% | 49% | 34% |
| JPMS Equity Research Coverage | 46% | 47% | 7% |
| IB clients* | 75% | 66% | 54% |

^{*}Percentage of investment banking clients in each rating category.

For purposes only of FINRA/NYSE ratings distribution rules, our Overweight rating falls into a buy rating category; our Neutral rating falls into a hold rating category; and our Underweight rating falls into a sell rating category. Please note that stocks with an NR designation are not included in the table above.

Equity Valuation and Risks: For valuation methodology and risks associated with covered companies or price targets for covered companies, please see the most recent company-specific research report at http://www.jpmorganmarkets.com, contact the primary analyst or your J.P. Morgan representative, or email research.disclosure.inquiries@jpmorgan.com.

Equity Analysts' Compensation: The equity research analysts responsible for the preparation of this report receive compensation based upon various factors, including the quality and accuracy of research, client feedback, competitive factors, and overall firm revenues.

Registration of non-US Analysts: Unless otherwise noted, the non-US analysts listed on the front of this report are employees of non-US affiliates of JPMS, are not registered/qualified as research analysts under NASD/NYSE rules, may not be associated persons of JPMS, and may not be subject to FINRA Rule 2711 and NYSE Rule 472 restrictions on communications with covered companies, public appearances, and trading securities held by a research analyst account.

This material does not take into account the specific investment objectives, financial situation or particular needs of the recipient. The recipient of this material must not distribute it to any third party or outside Australia without the prior written consent of JPMSAL. For the purposes of this paragraph the term "wholesale client" has the meaning given in section 761G of the Corporations Act 2001. Germany: This material is distributed in Germany by J.P. Morgan Securities plc, Frankfurt Branch and J.P.Morgan Chase Bank, N.A., Frankfurt Branch which are regulated by the Bundesanstalt für Finanzdienstleistungsaufsicht. Hong Kong: The 1% ownership disclosure as of the previous month end satisfies the requirements under Paragraph 16.5(a) of the Hong Kong Code of Conduct for Persons Licensed by or Registered with the Securities and Futures Commission. (For research published within the first ten days of the month, the disclosure may be based on the month end data from two months prior.) J.P. Morgan Broking (Hong Kong) Limited is the liquidity provider/market maker for derivative warrants, callable bull bear contracts and stock options listed on the Stock Exchange of Hong Kong Limited. An updated list can be found on HKEx website: http://www.hkex.com.hk. Japan: There is a risk that a loss may occur due to a change in the price of the shares in the case of share trading, and that a loss may occur due to the exchange rate in the case of foreign share trading. In the case of share trading, JPMorgan Securities Japan Co., Ltd., will be receiving a brokerage fee and consumption tax (shouhizei) calculated by multiplying the executed price by the commission rate which was individually agreed between JPMorgan Securities Japan Co., Ltd., and the customer in advance. Financial Instruments Firms: JPMorgan Securities Japan Co., Ltd., Kanto Local Finance Bureau (kinsho) No. 82 Participating Association / Japan Securities Dealers Association, The Financial Futures Association of Japan, Type II Financial Instruments Firms Association and Japan Investment Advisers Association. Korea: This report may have been edited or contributed to from time to time by affiliates of J.P. Morgan Securities (Far East) Ltd, Seoul Branch. Singapore: JPMSS and/or its affiliates may have a holding in any of the securities discussed in this report; for securities where the holding is 1% or greater, the specific holding is disclosed in the Important Disclosures section above. India: For private circulation only, not for sale. Pakistan: For private circulation only, not for sale. New Zealand: This material is issued and distributed by JPMSAL in New Zealand only to persons whose principal business is the investment of money or who, in the course of and for the purposes of their business, habitually invest money. JPMSAL does not issue or distribute this material to members of "the public" as determined in accordance with section 3 of the Securities Act 1978. The recipient of this material must not distribute it to any third party or outside New Zealand without the prior written consent of JPMSAL. Canada: The information contained herein is not, and under no circumstances is to be construed as, a prospectus, an

advertisement, a public offering, an offer to sell securities described herein, or solicitation of an offer to buy securities described herein, in Canada or any province or territory thereof. Any offer or sale of the securities described herein in Canada will be made only under an exemption from the requirements to file a prospectus with the relevant Canadian securities regulators and only by a dealer properly registered under applicable securities laws or, alternatively, pursuant to an exemption from the dealer registration requirement in the relevant province or territory of Canada in which such offer or sale is made. The information contained herein is under no circumstances to be construed as investment advice in any province or territory of Canada and is not tailored to the needs of the recipient. To the extent that the information contained herein references securities of an issuer incorporated, formed or created under the laws of Canada or a province or territory of Canada, any trades in such securities must be conducted through a dealer registered in Canada. No securities commission or similar regulatory authority in Canada has reviewed or in any way passed judgment upon these materials, the information contained herein or the merits of the securities described herein, and any representation to the contrary is an offence. **Dubai:** This report has been issued to persons regarded as professional clients as defined under the DFSA rules. **Brazil:** Ombudsman J.P. Morgan: 0800-7700847 / ouvidoria.jp.morgan@jpmorgan.com.

General: Additional information is available upon request. Information has been obtained from sources believed to be reliable but JPMorgan Chase & Co. or its affiliates and/or subsidiaries (collectively J.P. Morgan) do not warrant its completeness or accuracy except with respect to any disclosures relative to JPMS and/or its affiliates and the analyst's involvement with the issuer that is the subject of the research. All pricing is as of the close of market for the securities discussed, unless otherwise stated. Opinions and estimates constitute our judgment as of the date of this material and are subject to change without notice. Past performance is not indicative of future results. This material is not intended as an offer or solicitation for the purchase or sale of any financial instrument. The opinions and recommendations herein do not take into account individual client circumstances, objectives, or needs and are not intended as recommendations of particular securities, financial instruments or strategies to particular clients. The recipient of this report must make its own independent decisions regarding any securities or financial instruments mentioned herein. JPMS distributes in the U.S. research published by non-U.S. affiliates and accepts responsibility for its contents. Periodic updates may be provided on companies/industries based on company specific developments or announcements, market conditions or any other publicly available information. Clients should contact analysts and execute transactions through a J.P. Morgan subsidiary or affiliate in their home jurisdiction unless governing law permits otherwise.
